

Paremus and Exceptional Software Partner to Deliver Innovative SOA Solutions to U.S. Defense and Intelligence Agencies

London, UK, September 12th, 2007 – Paremus, developer of the Infiniflow™ Enterprise Service Fabric (ESF), and Exceptional Software Strategies, Inc., provider of information technology solutions and services to the U.S. Government, educational institutions, and private industry, today announced a partnership agreement that allows Exceptional Software to resell and support Paremus' innovate distributed SOA runtime, Infiniflow.

Federal agencies managing complex distributed infrastructures are under increasing pressure to deliver improved business solutions more quickly while reducing capital and operational costs. Infiniflow provides a service-oriented middleware fabric with a dynamic, distributed runtime to allow the rapid deployment and automatic optimization and management of applications on commodity hardware. Organizations with Infiniflow can take advantage of modular application development with OSGi™ technology and model-based, automated operational management with SCA (Service Component Architecture), in order to satisfy business requirements and control costs.

“We are excited about our partnership with Paremus and expanding our SOA capabilities with their product, Infiniflow,” said Raymond Bowen, President and co-founder of Exceptional Software Strategies Inc. “Infiniflow simplifies the deployment and development for an effective SOA distributive platform with its ease of use, agility, open standards and cost effectiveness. This will be of tremendous value to the US federal, state and local agencies in their SOA implementation process.”

“Having Exceptional Software join us as a Systems Integrator partner is tremendous,” said Richard Nicholson, CEO and co-founder of Paremus. “We’re looking forward to working together to service the growing demand from the US defense and intelligence markets for SOA-based solutions and Infiniflow.”

Press Release

About Paremus

Paremus offers Infiniflow™ – the Enterprise Service Fabric – a suite of lightweight, distributed, autonomic, SOA platforms for highly dynamic, composite, business applications. Leveraging the OSGi and Service Component Architecture standards, Infiniflow allows users to realize the full potential of distributed computing for their re-usable, composite service oriented applications. Infiniflow's distributed autonomic runtime environment offers maximum IT agility for businesses while delivering advanced resource management technology that allows automatic resource optimization to dramatically reduce datacenter operating costs. Infiniflow provides transparent support for composite POJO's and Spring-based business applications and makes it simple to enhance resilience, distribute, scale and manage these applications at runtime. Identified by Gartner as a Visionary in the Enterprise Application Server marketplace, Infiniflow is the ideal next generation solution to deliver competitive advantage for your enterprise today.
